EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with John Musone on 13 April 2007.

The application has been amended as follows:

In the Abstract

The Abstract has been amended as follows:

~~Cooling concept for turbo machines~~

The invention relates to a method and a device for cooling thermally stressed regions in a turbo machine which has a live-steam feed line (9), an inflow region (17), a housing (2) and an exhaust-steam region (7), a flow medium flowing through the turbo machine (1) and leaving in the exhaust-steam region (7) during operation, part of the flow medium from the live-steam feed line (9) being passed to the exhaust-steam region (7) and cooled by means of a heat exchanger (8) before entry into the turbo machine (1) and entering the turbo machine (1) via the inflow region (17), thermally stressed regions that are located in the inflow region (17) being cooled by the flow medium that has been cooled in this way.

Examiner Comments

Although 37 C.F.R. §1.72 does not require the Abstract to be limited to a single paragraph, the guidelines for preparation of Abstracts found in MPEP §608.01(b) state that, "The abstract should be in narrative form and generally limited to a single paragraph within the range of 50 to 150 words." Applicants' cooperation with agreeing to the deletion of "Cooling concept for turbo machines" is appreciated. Also, while "FIGURE 1" has been deleted in the Abstract submitted with the Substitute Specification on 3/2/2004, it is herein above deleted in order to expedite allowance of the application in case the Substitute Abstract is overlooked during publishing.
